Subject: Public Summary – Supervision Dashboard Discrepancy
Date: Wednesday, October 28, 2026 5:19:31 PM

Hi Jennifer,

As discussed, please see below a summary for external use regarding the Supervision Dashboard discrepancy.

Town of LaSalle 2026 Municipal & School Board Digital Election

Summary of Election Results Review and Supervision Dashboard Discrepancy

Key Assurance

The election results were reviewed and confirmed to be correct. The discrepancy was limited to the information presented in the Supervision Dashboard and did not affect the underlying ballots or the election results calculated from those ballots.

The integrity and accuracy of the election results were not affected.

Background and Review

Following the close of voting, a discrepancy was identified in figures shown in the administrative Supervision Dashboard. The underlying election records and results were reviewed to determine the nature and impact of that discrepancy.

The voting platform and the Supervision Dashboard perform different functions. The voting platform records the ballots cast and calculates the election results from those ballot records. The Supervision Dashboard is an administrative monitoring tool that provides a visual summary of voting activity and results across the different voting channels.

The review confirmed that the discrepancy was limited to the information presented in the Supervision Dashboard. It did not affect the ballots recorded in the voting platform or the election results calculated from those ballots.

Election Results Review

The review confirmed that the ballots recorded in the voting platform remained correctly stored and that the election results were calculated from those underlying ballot records.

The election results were reviewed and confirmed to be correct. No additional ballots were created as a result of the dashboard discrepancy, no ballot records were altered, and the discrepancy did not affect the calculation of the election results.

The raw election results report provided to the Town of LaSalle reflects the election results recorded in the voting platform.

Explanation of the Discrepancy

Voting was available through three channels: Web Voting, Fixed Kiosk and Nomadic Kiosk.

When the Supervision Dashboard generated its visual summary, the kiosk channels were grouped in a way that caused the kiosk data to be included an additional time in the figures displayed in the Supervision Dashboard.

The voting platform recorded a total turnout of **12,343 electors**. Of these, **1,095 ballots** were associated with kiosk voting.

As a result of the dashboard grouping issue, the displayed figure became:

$$12,343 + 1,095 = 13,438$$

This accounts for the full difference of 1,095 between the total turnout recorded in the voting platform and the corresponding figure displayed in the Supervision Dashboard.

The additional 1,095 reflected a duplication in the dashboard summary only. It did not represent additional ballots in the voting platform and was not used in the calculation of the election results.

Conclusion

The discrepancy was limited to the information presented in the Supervision Dashboard and did not affect the underlying ballots or the election results calculated from those ballots.

Comitia confirms that the review found the election results to be correct and unaffected by the Supervision Dashboard discrepancy.

The review also confirmed that each ballot remained recorded once in the voting platform and that the raw election results report provided to the Town of LaSalle reflects the election results recorded in the voting platform.

Based on this review, the integrity and accuracy of the election results were not affected by the dashboard discrepancy.

Kind regards,

Onno van Dommelen
